

**high efficiency compressed
air filters**

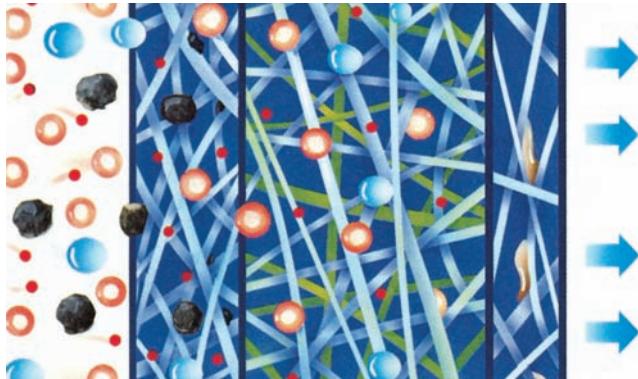

AIR VIP

THE REASONS FOR PURCHASING AIR VIP FILTERS

The usage of compressed gas in a manufacturing environment means to provide high quality of fluid which feed every single pneumatic tool. Compromising your compressed air supply can result in a reduction in product quality, affect site safety and can even result in a production line coming to a halt. A modest investment in the AIR VIP range of compressed air filters will pay for itself many times over.

The AIR VIP series meets both Pressure Equipment Directive PED 97/23 C E requirements and air purity ISO85731-1:2010 guidelines.

FILTRATION PRINCIPLES

- 1) Direct interception removes coarse particles which impact on the filtration surface.
- 2) Inertial impaction removes of particles thanks to the tortuous path formed by the microfibres.
- 3) Diffusion remove fine particles which adhere to the microfibres thanks to "Brownian motion".

THOUSANDS OF HOURS WITH CONSISTENT

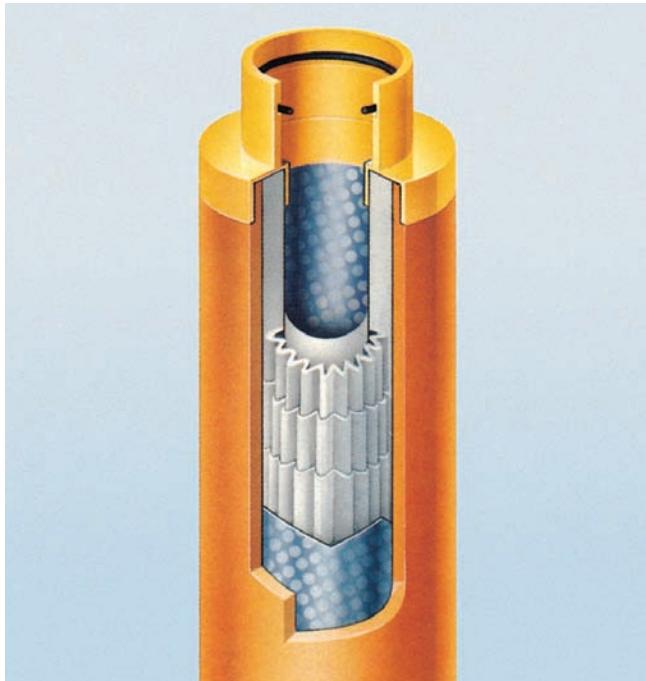

The ARS filter elements of AIR VIP series are manufactured using multiple media layers, each of which has a specific function.

The first layer is made by cellulose fibers impregnated with resins to provide strength and high performances even in presence of moisture; this layer retains solid particles greater than 5 micron.

The following filtration layer are made by borosilicate microfibres able to retain particles with size down to 0,01 micron and to catch mosts which are conveyed to the outer coalescing layer.

This outer barrier collects the separated droplets of water and oil, allowing them to run down to the bottom of the bowl of the housing, letting the purified air flowing out from the filter element.

The pleated construction of ARS range of filter elements provides a very high surface area for the retention of the solid particles (approx. 4-5 times when compared to the conventional rolled filter of most manufacturers); the result is an exceptionally long life & very low pressure drop for the element.

SAFETY SYSTEM

Any residual internal pressure is discharged through the safety device.

EASE OF INSTALLATION

The filter cartridge is retained using a positive seal O-ring. This design feature allows the quick and easy replacement of the filter element, eliminating the need for a tie rod.

SPACE REDUCTION

Only 6 cm of clearance under the filter bowl is required during element replacement.

COLOUR CODE

The element grade is clearly identified by the use of different coloured outer foam sleeves.

AUTOMATIC CONDENSATE DRAIN

The drain has three functions;
Automatic: activated by the compressed air during normal operation
Semi-automatic: operates under a no pressure condition
Manual

DIFFERENTIAL GAUGE

The differential gauge XAM-200 can be mounted facing either direction and accurately indicates when the filter element needs replacing.

O-RING SEAL

An O-ring seal ensures positive element location and eliminates the possibility of bypass.

PLEATED FILTER ELEMENT

Offers a high filtration surface area, low differential pressure loss and long life.

DUAL LAYER PROTECTION OF BODY

The surface treatment of the interior and exterior of the housing assures excellent corrosion resistance.

LEVEL INDICATOR

Displays the presence of collected liquid.

"RM" grade

10 micron
15 ppm

"RF" grade

1 micron
8 ppm
replacement at: 0.6 bar

Compressed air pre-filtration:

Removal of condensate and solid particles to protect air receivers and refrigerant dryers.
Pre filter upstream RB & RA grades.
After filter to collect dust generated by desiccant media of dryers.

**"RB" grade**

1 micron
0.1 ppm

replacement at: 0.6 bar

Oil separation and compressed air filtration:

Pre filter upstream refrigeration driers.
Pre filter upstream RA & CA grades.
Vacuum pump inlet protection filter.
Air filtration for general purpose

**"RA" grade**

0.01 micron
0.01 ppm

replacement at: 0.6 bar

High efficiency oil separation and filtration of compressed air and gases:

Upstream to adsorption driers.
Protection of sophisticated instrumentation.
Air treatment on spray paint plants.
Electronics, food & textiles industries.

**"CA" grade**

0.003 ppm

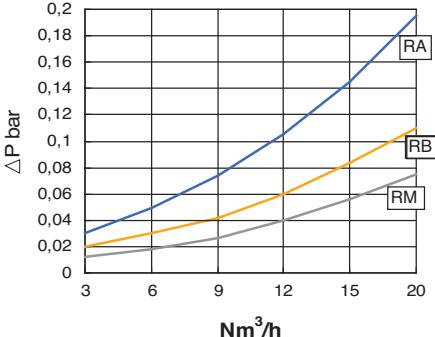

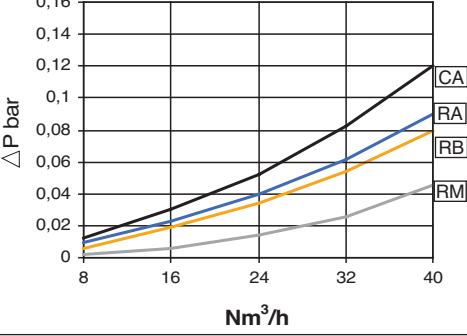

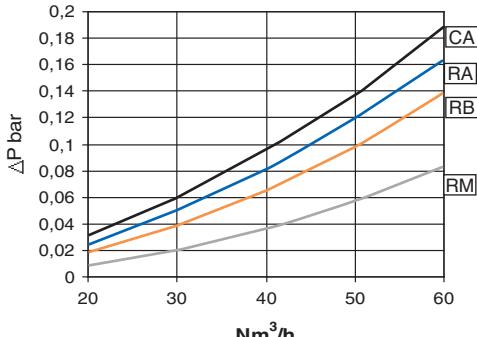

replacement at: 1000 hours

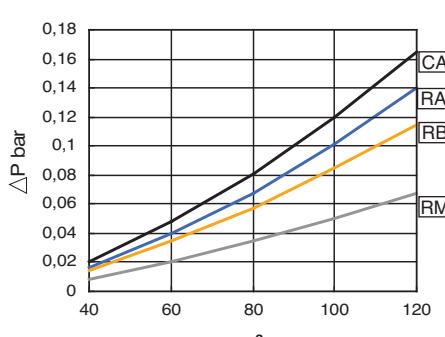

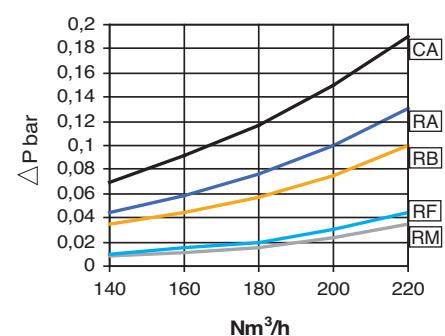

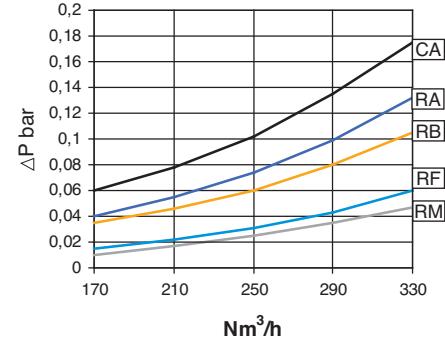

Elimination of odours and vapours from the compressed air:

To be installed downstream "RA" grade.
Compressed air for:

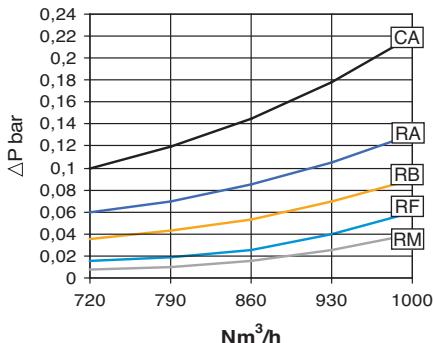

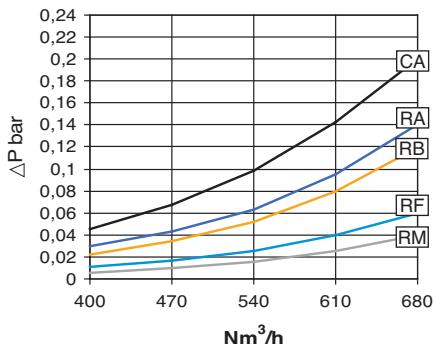

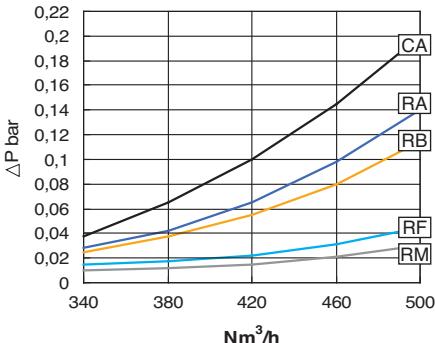

- food & beverage
- pharmaceutical
- process air
- textiles, electronics

* Flow rate values are related to 7 bar, for different line pressures, use the below correction factors.

TYPICAL APPLICATIONS

GENERAL USE

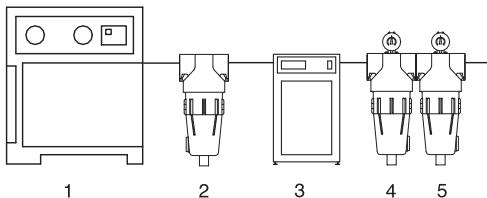

Air purity ISO 8573-1 : class 2.-.2

- 1- Compressor
- 2- Prefilter grade **RM**
- 3- Filter grade **RB**

WITH DEW POINT AT +3°C

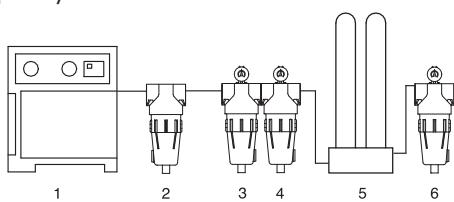

Air purity ISO 8573-1 : class 1.4.1

- 1- Compressor
- 2- Prefilter grade **RM**
- 3- **DRY-VIP** drier
- 4- Filter grade **RB**
- 5- Filter grade **RA**

WITH DEW POINT FROM -20°C to -40°C

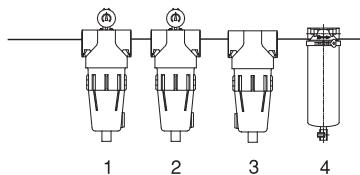

Air purity ISO 8573-1 : class 1.2.1 or 1.1.1

- 1- Compressor
- 2- Prefilter grade **RM**
- 3- Filter grade **RB**
- 4- Filter grade **RA**
- 5- **DRY PLUS** adsorption drier
- 6- After filter grade **RF**

PURE AND STERILE AIR – POINT OF USE

Air purity ISO 8573-1 : class 1.-.1

- 1- Filter grade **RB**
- 2- Filter grade **RA**
- 3- Filter grade **CA**
- 4- Sterile filter grade **SL**

MODULAR SYSTEM

INSTALLATION IN SERIES

Mounting kits are available to enable the installation of filters in series. The compact design allows the use of a multi stage system where minimal space is available.

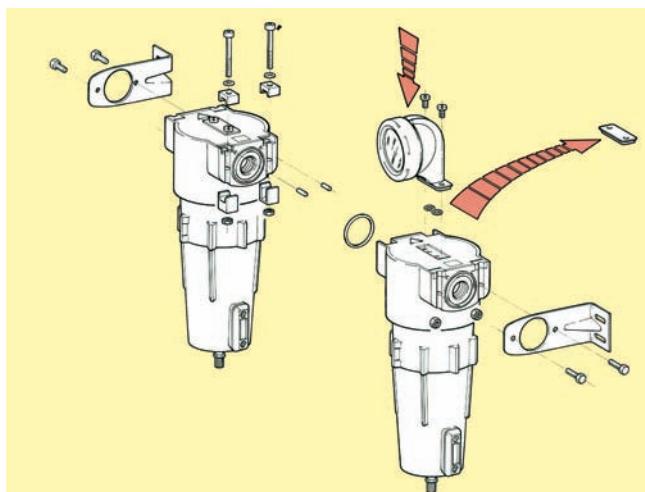

DESIGN OF EACH DETAIL

EASY INSTALLATION

All the accessories, mounting brackets, clamps and differential gauges are designed for an easily assembling.

XAC -21-230

Standard voltage: 230V-50/60
Operating pressure: 0.8-16 bar
Operating temperature: 1/60°C
Weight: 700 g

The automatic drain XAC-21-230 is used for the removal of condensate & oil emulsion from the compressed air system, without needlessly wasting expensive energy. The XAC-21 uses a capacitive level sensor which prevents the venting of compressed air during operation.

XAM-100

Max operating pressure: 16 bar
Max operat. temperature: 60°C
Scale: 0-1.4 bar

XAM-200

Max operating pressure: 16 bar
Max operating temperature: 70°C
Scale: 0-0.7 bar

XAM differential pressure gauges identify the more convenient time for cartridge change out.

XAM-100 adopts Bourdon tube as sensing element; the scale with central "0" consent the mounting on both side of the filter; the metallic casing with tempered glass window allows indoor and outdoor installation.

XAM-200, adopts membrane as sensing element; the dial is on both sides of the gauge; the casing is made with tecnopolymer; no pressure behind the window grants a great safety. **XAM-200EC** series includes the remote control interface.

XAD-251

Operating pressure: 0.6-16 bar
Operating temperature: 5 / 80°C
Weight: 65 g

The automatic float condensate drain is specified from models CDF-30 to the CDF-1050. The drain can run in 3 different ways:

Automatic: the elevation of the float opens the pilot valve, then the compressed air opens the shutter to allow the liquid to discharge.

Semi-automatic: to avoid liquid stagnations, the drain valve opens when the pressure drops below 0.6 bar.

Manual: the liquid is discharged by rotating the brass ratchet anti-clockwise.

XAD-651

Operating pressure: 0-16 bar
Operating temperature: 5 / 80°C
Weight: 0.6 Kg

Automatic float condensate drain with aluminium body for installation where large amounts of condensate need to be discharged.
The float mechanism is made in stainless steel.
